Class: 5E

Topic: Having technology at our fingertips

Having technology at our fingertips

Mary is a victim of Internet crimes as she shares a lot of her personal information through the Internet and ,unfortunately, was cheated on. However, is that the only thing the Internet brings us? The answer is obvious; sharing personal information through the Internet is dangerous due to privacy problems. However, when we think about it carefully, the Internet does have its positives; it can expand our social circle and enhance our academic knowledge.

To start, the Internet is a tool that plays a pivotal role in peer socializing. Some websites, like Twitter, Instagram, and Facebook, provide a place for us to connect with our friends. We can keep in contact with people in other countries in order to maintain close family and friendship ties. We can know what our friends have done or how they feel first-hand. We can show how we care for them then and there. Therefore, the Internet has brought people closer together and helps to improve relationships.

Moreover, the Internet can be used to enhance our knowledge. It is evident that there are plenty of learning resources on the Internet, like English videos and music. There are still numerous useful pages that we have never known about before. So, to improve our fluency, we can benefit from the sharing function of the Internet. Videos that our friends share on Facebook can be advantageous and we can study them at any time.

Some people claim that the over-sharing of personal information may result in Internet crimes and that people can easily fall into online traps. However, in my opinion, when used properly, the Internet can be very useful. If we are always protected, we can prevent internet crime. Some functions in Facebook, like links to phone numbers and high security passwords, can help protect our personal privacy. As a result, sharing through the Internet will not be so dangerous.

To conclude, the prevalence of online sharing can bring advantages to both our social life and academic studies and will become more useful in our daily lives.
